

# AMERICA'S LEADING MANUFACTURER OF

**CONCRETE CHEMICAL PRODUCTS** 

## **Primary Uses**

### **Finishing Aid**

Designed for areas with high evaporation rate conditions due to factors such as high temperatures, wind, direct sun, or low humidity.

#### **Concrete Curing**

Retains moisture in the slab during curing and reduces water vapor transmission.

#### Hardener & Densifier

Creates a denser, less-permeable concrete surface that is more resistant to liquid penetration.

#### **Efflorescence**

Decreases potential for alkali silica reaction. Ideal for all colored and decorative concrete applications.

#### **Type 1L Cements**

Facilitates easier finishing with silica fume, Portland Limestone, or Type 1L cement and air-entrained concrete mixes.

#### **Curling Reduction**

Reduces the potential for slab curling.
