

Multi-purpose form treatment

EZ CLEAN & RELEASE is a ready to use highly reactive petroleum mixture that, when properly applied to concrete forms with concrete build-up, will soften the hardened concrete and “self-clean” as the forms are stripped.

✓ Benefits

- Acts as a cleaner and form release to remove scum and build up without taking your concrete forms out of service.
- Reduces concrete buildup when applied immediately after form removal by chemically reacting with the fresh concrete to prevent further hardening while also slowly softening existing hardened concrete buildup.
- Softened buildup is easily removed using a power washer (Excessive hardened buildup may require repeated use to soften it enough for power washing.)
- Softens buildup when applied to forms in storage.
- Use of EZ Clean & Release is less damaging to forms than sandblasting, acid cleaning or scraping.
- Use of EZ Clean & Release does not require aluminum forms to be re-seasoned after use.

Usage

- Spray right after stripping the forms so EZ Clean Release can soak in and soften existing build up. Recommended: 1 drum per set of forms until it's gone. Then use SpecChem SpecStrip Ultra Blue or SpecStrip/SpecStrip Plus depending on market preference.
- In house, use, form cleaner/ form release agent that allows contractors to clean their forms without taking them out of service vs. sand blasting, aggressive pressure washing or acid cleaning that will require re-seasoning.
- For new forms: season with SpecChem Form Seasoning WB & use EZ Clean Release as a break in form release. 1 drum per set of forms until gone - then use SpecStrip Ultra Blue or SpecStrip/SpecStrip Plus as your everyday form release agent.

Standards

- VOC Compliant < 250 grams per liter

Packaging

- 275 gallon totes (1040.9L)
- 55 gallon drums (208.2 L)
- 5 gallon pails (18.9L)
