

## Advanced Colloidal Silica Concrete Finishing Aid

INTRAFILM is a troweling aid designed for efficient concrete finishing. Utilizing colloidal silica, it facilitates easier and faster finishing while improving the concrete's durability, compressive strength, and permeability. INTRAFILM helps reduce fatigue and extends workability under challenging conditions, leading to consistently better concrete surfaces.

### ✓ Benefits

- Lubricates the surface for faster and easier finishing
- Increases cream for a smoother, more polished finish
- Extends workability under hot, dry, and windy conditions
- Reduces operator fatigue and trowel wear
- Aids in the application of shake-on hardeners
- Enhances concrete surface durability and strength
- Creates a denser, less permeable surface for liquid penetration and staining resistance
- Increases impact and abrasion resistance
- Diminishes efflorescence in colored and standard concrete
- Decreases the potential for alkali silica reaction (ASR)
- Available in concentrate and ready-to-use formulas
- Does not increase the water-to-cement (W/C) ratio
- Will not affect or change the color of the concrete

## Usage

- Designed for use during the floating and troweling stages of concrete placement
- Use a clean, hand-pump tank-type sprayer with a low-pressure tip to distribute the product evenly
- Lightly mist over entire surface to be treated and immediately follow with screeding, floating, troweling, or other finishing procedures

## Packaging

- 55 gallon drums (208.2 L)
- 5 gallon pails (18.9 L)
- 1 gallon jug (3.79 L) (4 jugs/case)

## Compliance/Standards

- VOC Compliant  
South Coast Air Quality Mgmt  
District Compliant USDA
